(54) DECORATIVE CONTAINER

'(11) 5-42958 (A) (43) 23.2.1993 (19) JP

(2!) Appl. No. 3-70012 (22) 2.4.1991

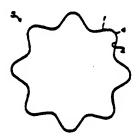

(71) MINORU SUGAWARA (72) MINORU SUGAWARA

(51) Int. Cl. B65D65.04.A45C11 00.A47G7/03

PURPOSE: To improve the working efficiency to produce a decorative container for which a sheet is used, and reduce the cost.

CONSTITUTION: Since a wire 4 with plasticity and shape retention is pinched and adhered between a sheet shaped outer cover 1 and an inner cover 2 the outer cover 1 and inner cover 2 can be freely deformed into a desired shape. At the same time, since the outer cover 1 and inner cover 2 which have been deformed once maintain the shapes, a decorative container 5 with an optional shape and good appearance can be easily manufactured.

(54)【発明の名称】 建飾用入れ物

(57) 【要約】

【目的】 シートを用いた装飾用入れ物の作成の作業均 率を改善し、コストダウンを実現する。

【構成】 シート状の外カパー1、内カパー2の間に可 受性かつ保形性ある針金4を挟み込んで貼着したため、 外カパー1。内カパー2を希望する形状に自由に変形さ せ、側部6を形成し得ると同時に、いったん変形した外 カパー1、内カパー2はその形状を維持するため、自由 な形状の装飾用入れ物Sを、間幕に外観性良く製作でき ð.

【請求項1】 シートと、

このシートに取付けられた可塑性かつ保形性ある成形部 材とを具座し、

前記成形部材を屈曲して形成したことを特徴とする装飾 用入れ物。

【発明の詳細な説明】

【0001】 (発明の目的)

[0002]

【産業上の利用分野】本発明は、シートを折曲してなる 10 装飾用入れ物に関する。

[0003]

【従来の技術】従来この種の装飾用入れ物は、紙、布等 のシートを、手作業により希望の形状に折曲して形成し たうえ、リポン等の紐体によって締結することによりシ ートを保形し、作成されていた。

[0004]

【発明が解決しようとする課題】しかしながら、上記従 来のようなシートを用いると、外蔵住良く装飾用入れ物 を作成するには一定の技術が必要となり、作業効率が悪 *20* く、コストアップの原因となっていた。

【0005】本発明は、このような点に基みてなされた もので、簡易に外観性良く作成しうる装飾用入れ物を提 供することを目的とする。

【0006】(発明の構成)

[0007]

【集理を解決するための手段】本発明は、シートと、こ のシートに取付けられた可塑性かつ保形性ある成形部材 とも具備し、前記成形部材を屈曲して形成したものであ ð.

[0008]

【作用】本発明は、シートに可塑性かつ保形性ある成形 部材を配設したため、この成形部材を風曲することによ り、シートを希望する形状に自由に変形させ得ると同時 に、いったん変形したシートはその形状を維持し得る。

[0009]

【実施例】以下、本発明の装飾用入れ物の一実施例の構 成を図面を参照して説明する。

【0010】図1ないし図3において、1、2はそれぞ れシートとしての外力パーと内力パーであり、この外力 40 パー 1 と内カパー 2 は、それぞれ何えば紙、布、出路、 皮革、金属、ゴム、ピニール等からなる超形のシートで あり、ほ々な外装が施されている。そして、外力パー1 は一辺的15cmの矩形状であり、内カパー2は外カパー 1よりも若干小さくなっている。

【0011】また、4は成形部材としての針金であり、 この針金4は、鉄などの金属を銀状に成形して外装を施 したものを、所定の長さに切断し、彎曲して環状に成形 したものである。

【0012】そして、外カバー1の略中央部に環状に成 50 【図1】本発明の一実施例を示す装飾用入れ の使用状

形した針金4を配置した状態で、針金4を介してみかり ー1と内力パー2を針金4近時で貼着し、外力パー1と 内カパー2とで針金4を決着して装飾用入れ物5を構成 する.

【0013】そうして、これらの外カバー1、内カバー 2 を針金4とともに庭曲して餌部6を形成し、鉢形状等 の希望の形状に成形する。そして、このように作成した 装飾用入れ物 5 を、例えば卓上に配置し、この装飾用入 れ物 5 に例えば菓子等を入れて使用する。また本実施例 の装飾用入れ物 5 は装飾性が高く、ショーウインドウの ディスプレイ用としても好運である。

【0014】そして、本実施例の装飾用入れ物5によれ ば、外カバー1、内カバー2に可塑性かつ保形性ある針 金4を配設したため、針金4を用曲することにより、外 カパー1、内カパー2を希望する形状に自由に変形させ 得ると同時に、いったん変形した外カバー1、内カバー 2はその形状を維持するため、装飾用入れ物5の作成に 技術を必要とせず、簡易に外収性良く自由な形状の装飾 用入れ物 5 を製作でき、作業効率を改替し、コストダウ ンを実現することができる。

【0015】また、二枚のシートの間に針金4を貼着し ているため、二枚のシートによる新鮮な外観を実現する と同時に針金4 を固定することができ、さらに作業効率 を改善することができる。

【0016】なお、シートの形状あるいは枚数等は、本 実施例のものにほられるものではなく、例えばシートの 形状は、円形状、多角形状、星形形状その他であっても 構わない。

【0017】また成型部材の形状も、様状の針金に限ら 30 れるものではなく、例えば既伏の帯板伏であっても良 61.

【0018】そして、本発明の装飾用入れ物5は、値木 鉢カバーとして使用することも可能であり、この場合は カパーの対象となる植木鉢8の底面および外周面を覆い 得る大きさの外力パー1および内力パー2を用い、 猛物 を植えこんだ植木鉢8を折曲前の装飾用入れ物5の貼中 央部に裁量した状態で、外力パー1、内力パー2を針金 4 とともに屈曲することにより様々な形状の植木鉢の外 形に対応する端木鉢カバーを作成することができる。

[0019]

【兒明の効果】本兇明の貧齢用入れ物によれば、シート に可塑性かつ保形性ある成形部材を配設したため、この 成形部材を抽曲することにより、シートを希望する形状 に自由に交形させ得ると同時に、いったん変形したシー トはその形状を維持し得るため、シートを用いた装飾用 入れ の作成に技術を必要とせず、簡易に外級性良く自 由な形状の装飾用入れ を製作でき、作業効率を改善 し、コストダウンを実現することができる。

(54) [Title of the Invention] Ornamental Container

(57) [Abstract]

[Purpose]

To improve the efficiency of the work of making an ornamental container that uses sheets, and to realize a reduction in costs.

[Constitution]

Because a wire 4 that has plasticity and a shape preserving property has been inserted in between an external cover 1 and an internal cover 2 that have a sheet form and attached by adhering, the external cover 1 and internal cover 2 are freely changed to a desired shape, and at the same time as being able to form the side part 6, because the external cover 1 and internal cover 2 that have once been changed maintain that shape, an ornamental container 5 with a free shape can be easily made with a good outward appearance.

sheet 1

sheet 2

5 ornamental container

4 forming member

[Claim]

[Claim 1]

An ornamental container characterized by being endowed with a sheet

and a forming member that has plasticity and a shape preserving property that has been attached to this sheet,

and by the fact that said forming member is bent and formed.

[Detailed Description of the Invention]

[0001] [Purpose of the Invention]

[0002]

[Industrial Field of Application]

The present invention concerns ornamental containers formed by bending a sheet.

[0003]

[Prior Art]

Up to now this kind of ornamental container was made by preserving the shape of a sheet by tightening securely with a band, such as a ribbon, after a sheet of paper, cloth, etc., was bent and formed to the desired shape by hand.

[0004]

[Problem that the Invention is to Solve]

However, when using the conventional kind of sheet mentioned above, a fixed technology for making an ornamental container with a good appearance becomes necessary, and it became a factor in raising the cost and worsening the efficiency of the work.

[0005]

The present invention was made considering this point and aims to offer an ornamental container which can easily be made that has a good appearance.

[0006]

[Constitution of the Invention]

[0007]

[Means of Solving the Problem]

The present invention is endowed with a sheet and a forming member that has plasticity and a shape preserving property attached to this sheet and the above-mentioned forming member is bent and formed.

[8000]

[Operation of the Invention]

The present invention, because a forming member that has plasticity and a shape preserving property is provided to a sheet, a sheet can be freely changed to a desired shape by means of bending this forming member, and, at the same time, a sheet that has been changed once can maintain that shape.

[0009]

[Embodiment]

Below, the constitution of one embodiment of the ornamental container of the present invention is explained with reference to the figures.

[0010]

In Figures 1 to 3, 1 and 2 are, respectively, the external cover and the internal cover as sheets. This external cover 1 and internal cover 2 are sheets of rectangles each composed of, for example, paper, cloth, plastic, leather, metal, rubber, vinyl, etc. and various wrappings are carried out. And, the external cover 1 is a rectangle approximately 15cm on one side, and the internal cover 2 is slightly smaller than the external cover 1.

[0011]

Furthermore, 4 is wire regarded as the forming member. This wire 4 is one in which a metal such as steel was linearly formed and wrapped, cut to a prescribed length, curved and circularly formed.

[0012]

And, in the state in which the circularly formed wire 4 is arranged in the center of the outline of the external cover 1, via the wire 4 the external cover 1 and internal cover 2 are attached by adhering in the vicinity of the wire 4, and the wire 4 is attached by being sandwiched between the external cover 1 and internal cover 2 and the ornamental container 5 is formed.

[0013]

And, these, the external cover 1 and internal cover 2, are bent together with the wire 4 forming the side part 6, and the desired shape such as a pot shape is formed. And then, the ornamental container 5 that has been formed in this way is placed on a table, for example, and into this ornamental container 5 candy, for example, is put and it is used. Furthermore, the ornamental nature of the ornamental container 5 of the present embodiment is great and it is also suitable for use in a show window display.

[0014]

And, if based on the ornamental container 5 of the present embodiment, because a wire 4 that has plasticity and shape preserving properties is provided to an external cover 1 and internal cover 2, the shape of the external cover 1 and internal cover 2 can be freely changed to a desired shape by bending the wire 4 and, at the same time, because the external cover 1 and internal cover 2 that have once been changed maintain that shape, skill in making an ornamental container 5 is not necessary, and an ornamental container 5

with a free shape and a good appearance can easily be made, work efficiency can be improved and cost reduction can be realized.

[0015]

Furthermore, because a wire 4 is attached by adhering between two sheets, a fresh appearance is realized by the two sheets and, at the same time, the wire 4 can be fixed, furthermore, work efficiency can be improved.

[0016]

Furthermore, the shape or number of sheets, etc., is not limited to those of the present embodiment. For example, the shape of the sheets may be circular, polygonal, star shaped or some other shape.

[0017]

Furthermore, the shape of the forming member also is not limited to a linear wire. For example, a circular band plate shape is also acceptable.

[8100]

And, the ornamental container 5 of the present invention can also be used as a flowerpot cover. In this case, an external cover 1 and internal cover 2 large enough to cover the bottom surface and circumferential surface of the flowerpot 8 to be covered is used and with a flowerpot 8, in which a plant has been planted, placed and held on top of the center of the outline of the ornamental container 5 before bending, by bending the external cover 1 and internal cover 2 together with the wire 4, flowerpot covers that correspond to the external shapes of flowerpots of various shapes can be made.

100191

[Effects of the Invention]

If based on the ornamental container 5 of the present invention, because a forming member that has plasticity and shape preserving properties is provided in the sheets, by bending this forming member, the sheets can be freely caused to change to a desired shape, and at the same time, because the sheets that have once been changed can maintain that shape, skill is not necessary in the creation of ornamental containers that use sheets, and an ornamental container with a free shape and good appearance can be easily made, work efficiency can be improved, and cost reduction can be realized.

[Brief Explanation of the Figures]

[Figure 1]

A is a perspective view that shows the use state of the ornamental container set forth by one embodiment of the present invention.

[Figure 2]

A cross-sectional view that shows the same use state as above.

[Figure 3]

A plane view with one part of the ornamental container before bending notched the same as above.

[Figure 4]

A perspective view that shows the use state of an ornamental container set forth by another embodiment of the present invention.
